

I hope u people are working with your chosen projects. Your presentation may be held by 9th October. Need to make sure of the following:

1. Technical Report (PDF)

Must include:

- Problem statement and intended users
- Input data / knowledge-base description
- Solution architecture (pre-trained model, RAG pipeline and/or AI-agent design)
- Implementation and configuration explanation with workflow diagrams
- Evaluation steps and results
- Responsible AI measures adopted (grounding, privacy, security, human oversight)
- Innovation highlights (custom tools, agent behaviors, prompt design, etc.)

2. Video Demonstration (5–10 minutes)

- Walkthrough of the input data, model/RAG/agent pipeline, sample interactions, and results.
- Real-time demonstration of system behavior, including grounded responses with citations.

3. Academic Integrity and AI-Tool Usage Declaration

- Every student signs both declarations below; submissions without signed declarations are not evaluated.
- Academic integrity: the submission is original work; all external code, datasets, models and documents are cited; results are not fabricated; individual contributions are accurately stated.
- AI-tool usage: each AI tool or pre-trained model used (including for coding assistance) is declared with its purpose, the artifact affected, and how the output was verified. Students remain accountable for correctness and must be able to explain all submitted work.

AI Model/Tool	Purpose	Artifact affected	Verified by student

4. Folder structure : Use Github/Gdrive to share.

UniversityName_StudentName_RegisterNo_CSx_AIML/
